■ Quarterly national accounts - Detailed results Q4 2014

Household's purchasing power declined in Q4 2014 (-0.2%) but increased over the year (+1.1%)

In Q4 2014, GDP in volume terms increased by 0.1%. Over the year, GDP rose by 0.4% as in 2013. The previous estimation (February 13th, 2014) is thus broadly confirmed.

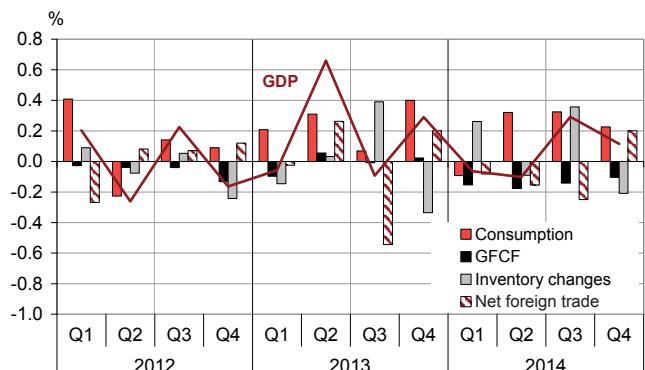

Household consumption expenditure increased slightly in Q4 2014 (+0.2% after +0.3% in Q3 2014). Conversely, total gross fixed capital formation (GFCF) decreased again (-0.5% after -0.6%). Thus, final domestic demand (excluding inventory changes) rose slightly and contributed for +0.1 points to GDP after +0.2 points in Q3. Exports accelerated markedly in Q4 (+2.5% after +1.0%), while imports kept on increasing (+1.7% as in the previous quarter). Finally, foreign trade balance contributed positively to activity: +0.2 points after -0.2 points. However, changes in inventories contributed for -0.2 points, after +0.4 points in the previous quarter.

Households' purchasing power decreased in Q4 2014 (-0.2%) but increased over the year (+1.1%)

In nominal terms, households' gross disposable income (GDI) stepped back in Q4 (-0.1%, after +0.5% in the previous quarter). Wages received by households rose at the same rate as during the previous quarter (+0.3%) but taxes on incomes and wealth accelerated (+3.8% after -0.1%) due to the impact of several new measures for 2014 (abolition of income tax exemptions and reduction of the cap on the family quotient). In Q3 their effect on the income tax revenues was offset by lower taxes on the income of modest households.

* This growth rate is seasonally and working-day adjusted; volumes are chain-linked previous-year-prices volumes.

In Q4 2014, contributions paid by households sped up slightly (+0.9% after +0.7%). Social benefits kept increasing (+0.8% after +0.9%).

Consumption prices were stable in Q4 (0.0% after -0.1%). All in all, household's purchasing power declined by 0.2% after increasing in the previous quarter (+0.6%). In 2014, households' purchasing power rose (+1.1%) after a stagnation in 2013. Taken individually (measured per consumption unit), it grew by 0.4% in 2014 after three years of decline (-0.6% in 2013).

In Q4, household consumption in volume increased by 0.2% whereas purchasing power declined. Thus, the saving ratio decreased by 0.3 points to 15.4%.

Non-financial corporations' profit ratio increased in Q4 2014

Non-financial corporations' added value accelerated in Q4 2014 (+0.9% after +0.5%) particularly due to the favorable effect of lower oil prices on input prices. The wages they pay (including social contributions) remained slack (+0.3% after +0.2%). Finally, non-financial corporations' profit ratio rose by 0.4 points, from 29.5% to 29.9%. Over the year 2014, it held almost steady (29.7% after 29.8%): The favorable effect of the tax credit for encouraging competitiveness and jobs (CICE) was offset by a real wages increase outpacing productivity gains.

In Q4 2014, general government deficit slightly reduced

In Q4 2014, general government net borrowing decreased by 0.2 points, from 4.1% to 3.9% of GDP. General government expenditure rose by 0.3% (or +1.0 billion of euros). At the same time, receipts increased by 0.7% (or 1.9 billions of euros) owing to the growth of taxes on incomes and social contributions. Over the year, deficit stood at 4.0% of GDP after 4.1% in 2013.
