

**- The impact of profiling on the description of the industry
(Vincent Hecquet, INSEE)**

The presentation will recall the method of profiling groups of different sizes. It will also analyze how the description of industry is affected by the use of “profiled enterprises”, compared to the one obtained with legal units: weight of industry in the economy, types of service activities integrated as subsidiaries in industry groups, weight of large industrial enterprises in industrial value added, employment, export sales, etc..
