

# Table of contents

|           |   |            |
|-----------|---|------------|
| <b>I</b>  | <b>Part 1: Describing geolocalized data</b>                           |            |
| <b>1</b>  | <b>Descriptive Spatial Analysis</b> .....                             | <b>3</b>   |
| 1.1       | Different types of spatial data                                       | 4          |
| 1.2       | Concepts in cartographic semiology                                    | 7          |
| 1.3       | Mapping data with R   | 10         |
| 1.4       | Examples of studies using aggregated spatial data                     | 26         |
| <b>2</b>  | <b>Codifying the neighbourhood structure</b> .....                    | <b>31</b>  |
| 2.1       | Defining neighbours   | 32         |
| 2.2       | Attributing weights to neighbours                                     | 42         |
| <b>II</b> | <b>Part 2: Measuring the importance of spatial effects</b>            |            |
| <b>3</b>  | <b>Spatial autocorrelation indices</b> .....                          | <b>51</b>  |
| 3.1       | What is spatial autocorrelation?                                      | 52         |
| 3.2       | Global measures of spatial autocorrelation                            | 55         |
| 3.3       | Local measures of spatial autocorrelation                             | 62         |
| 3.4       | Spatio-temporal indices   | 68         |
| <b>4</b>  | <b>Spatial distribution of points</b> .....                           | <b>71</b>  |
| 4.1       | Framework of analysis: basic concepts                                 | 74         |
| 4.2       | Point processes: a brief presentation                                 | 76         |
| 4.3       | From point processes to observed point distributions                  | 81         |
| 4.4       | What statistical tools should be used to study spatial distributions? | 83         |
| 4.5       | Recently proposed distance-based measures                             | 95         |
| 4.6       | Multi-type processes  | 98         |
| 4.7       | Process modelling   | 107        |
| <b>5</b>  | <b>Geostatistics</b> .....  | <b>113</b> |
| 5.1       | Random functions  | 114        |
| 5.2       | Spatial variability   | 116        |
| 5.3       | Fitting variogram   | 122        |
| 5.4       | Ordinary kriging  | 127        |
| 5.5       | Support and change of support   | 134        |
| 5.6       | Extensions  | 136        |

|     |                                |     |
|-----|--------------------------------|-----|
| 5.7 | Combined models with variogram | 141 |
|-----|--------------------------------|-----|

### III

## Part 3: Taking spatial effects into account

|           |   |            |
|-----------|---|------------|
| <b>6</b>  | <b>Spatial econometrics - common models</b>   | <b>149</b> |
| 6.1       | What are the benefits of taking spatial, organisational or social proximity into account?                   | 151        |
| 6.2       | Autocorrelation, heterogeneity and weightings: a review of key points in spatial statistics                 | 152        |
| 6.3       | Estimating a spatial econometrics model   | 154        |
| 6.4       | Econometric limits and challenges   | 160        |
| 6.5       | Practical application under R   | 163        |
| <b>7</b>  | <b>Spatial econometrics on panel data</b>   | <b>179</b> |
| 7.1       | Specifications  | 180        |
| 7.2       | Estimation methods  | 186        |
| 7.3       | Specification tests   | 189        |
| 7.4       | Empirical application   | 190        |
| 7.5       | Extensions  | 198        |
| <b>8</b>  | <b>Spatial smoothing</b>  | <b>205</b> |
| 8.1       | Kernel smoothing  | 206        |
| 8.2       | Geographical smoothing  | 212        |
| 8.3       | Implementation with R   | 217        |
| <b>9</b>  | <b>Geographically Weighted Regression</b>   | <b>231</b> |
| 9.1       | Why use geographically weighted regression?   | 232        |
| 9.2       | Geographically Weighted Regression  | 234        |
| 9.3       | Robust Geographically Weighted Regression   | 240        |
| 9.4       | Quality of estimates  | 246        |
| 9.5       | A predictive application  | 247        |
| 9.6       | Precautions to take   | 250        |
| <b>10</b> | <b>Spatial sampling</b>   | <b>255</b> |
| 10.1      | General   | 256        |
| 10.2      | Constructing primary sampling units of small area and with a constant number of secondary statistical units | 257        |
| 10.3      | How to draw a spatially balanced sample   | 260        |
| 10.4      | Comparing methods   | 268        |

|           |   |            |
|-----------|---|------------|
| <b>11</b> | <b>Spatial econometrics on survey data</b> .....                    | <b>277</b> |
| 11.1      | First approach by simulation  | 280        |
| 11.2      | Prospects for resolution  | 288        |
| 11.3      | Empirical application: the manufacturing sector in Bouches-du-Rhône | 291        |
| <b>12</b> | <b>Small area estimation and spatial correlation</b> .....          | <b>305</b> |
| 12.1      | Setting up the model  | 306        |
| 12.2      | Forming the "small area" estimator                                  | 312        |
| 12.3      | The quality of estimators   | 316        |
| 12.4      | Implementation with R   | 320        |
| <b>IV</b> | <b>Part 4: Extensions</b>   |            |
| <b>13</b> | <b>Graph partitioning and analysis</b> .....                        | <b>327</b> |
| 13.1      | Graphs and geographical analysis of city networks                   | 328        |
| 13.2      | Graph partitioning methods  | 333        |
| <b>14</b> | <b>Confidentiality of spatial data</b> .....                        | <b>349</b> |
| 14.1      | How to evaluate spatial disclosure risk?                            | 351        |
| 14.2      | How to deal with disclosure risk?                                   | 354        |
| 14.3      | Application for a grid of 1 km <sup>2</sup> squares                 | 360        |
| 14.4      | Differencing issues   | 367        |
|           | <b>Index</b> .....  | <b>375</b> |
