■ ILO unemployment rate and labour market indicators: results of the Labour Force Survey in Q2 2010

Decrease in the unemployment rate in Q2 2010

• The unemployment rate

The unemployment rate decreased in Q2 2010

In Q2 2010, the average ILO unemployment rate in metropolitan France and overseas departments stood at 9.7% of the active population.

In **metropolitan France** only, 9.3% of the active population was unemployed, i.e. 2.6 million people. It is lower than in Q1 2010, but stays at a high level.

More generally, in metropolitan France, 3.3 million people did not work but **would like to work**, whether they are available or not for work within two weeks, or whether they look actively for a job or not (see *additional indicators on the internet*).

ILO-unemployment rate in metropolitan France

Seasonally adjusted, average over quarter - Metropolitan France

	ILO-unemployment rate (%)		Variation in point		Thousands
	2010 Q1	2010 Q2 (p)*	over quarter	over year	
Total	9,5	9,3	-0,2	0,2	2 624
15-24 years	23,3	23,3	0,0	-0,5	632
25-49 years	8,6	8,4	-0,2	0,2	1 543
50 years and more	6,6	6,1	-0,5	0,2	450
Men	9,3	9,1	-0,2	0,1	1 351
15-24 years	24,0	22,0	-2,0	-3,0	328
25-49 years	8,3	8,3	0,0	0,6	792
50 years and more	6,2	6,0	-0,2	0,3	231
Women	9,7	9,4	-0,3	0,1	1 273

• ILO employment and activity

The employment rate of the population aged 15-64 years was stable at 63.8% in Q2 2010. This stability hides an increase in the temporary contract, and a decline in the permanent contract: the proportion of temporary contract in the population aged 15-64 years increased at 6.6%, while the proportion of permanent contract in the same age group decreased at 4.9%.

Permanent and temporary contract employment rate (15-64 years)

Underemployment decreased in Q2 2010

On Q2 2010, 5.8% of the persons employed are **underemployed**. The decrease, -0.3 point, is due to the decline of the slack work, which goes from 0.8% of the employed down to 0.5% in the second quarter. The **unwanted part-time** was stable at 5.3% of the employed (see additional indicators on the internet).

ILO underemployment

• Revision

The ILO unemployment rate of Q1 2010 is not revised compared to the temporary publication of June 2010.

A more precise estimate

In order to improve the precision of the data on the labor market, INSEE gradually increased the size of the sample of the Labour Force Survey since the first quarter of 2009. The operation ended with the publication of Q2 2010 results; the size of the sample has been increased by 50%. Consequently, the estimate of the quarterly unemployment rate is more precise (+/-0.3 point against +/- 0.4 point before the increase of the sample). The estimate of the variation is also more precise, but within the limits of the rounding (+/-0,3 point).

More:

- An **unemployed person for the International Labour Office** (ILO) is a person in age to work (15 years or more) who did not work, even one hour, during the reference week, who is available to work within two weeks and who looked actively for a job in the previous month (or has found an employment which begins in three months). The **part of the unemployed persons within the total population** differs and is lower than the **unemployment rate**, which is the ratio between the number of unemployed people and the number of active people (employment + unemployment).

- The **employment rate** is the ratio between employed people and the total population. The **full-time employment rate (or part-time employment rate)** is the ratio between full-time (or part-time) employed people and the total population. The **full time equivalent employment rate** is the ratio between the number of jobs converted into full-time and the total population. The **core employment rate** is the arithmetic average of employment rates by age detail. It permits to erase the demographic weight of mixed age groups.

- The **activity rate** is the ratio between active people (employed + unemployed) and the total population. The **active life expectancy** represents the average duration of activity in years of a fictitious generation subject to the conditions of activity of the period. It is independent of demographic structure.

- The **underemployment for the ILO** covers the persons who have a part-time job, who wish to work more hours during the reference week, and who are available to do it, whether they are looking for a job or not (**unwanted part-time**). Are also included in the underemployment the persons having involuntarily worked less than usually (slack work).
