To find out more :

The calculation of the indexes is based on the transactions concluded during the quarter. The methodology is based on models explaining the price of housing according to its characteristics. With these models, the current value of a reference housing stock is estimated. Methodological principles of calculation of indexes are found in "Les indices Notaires-Insee de prix des logements anciens – version 2 des modèles hédoniques", Insee Méthodes n° 111 released in December 2005.
