Definition

The dwellings maintenance and improvement work price index (IPEA) is a quarterly index which measures the changes in prices - without VAT- invoiced by firms for their maintenance and improvement works in existing dwellings during the quarter under review. The "producer cost index in specialised construction in existing buildings" (ICP 43BTR) reflects the changes in costs occurred by these same firms.

Method of calculation

The dwellings maintenance and improvement price index (IPEA) is calculated quarterly, based on observations of prices collected on a sample of firms selling maintenance and improvement works in existing dwellings in metropolitan France to final clients, *en* which compulsorily includes the supplying and laying of materials. Each firm follows every quarter "typical works" among those which are done the most frequently, and which reflects the price trends of a bigger family of works. As well as the technical description of the work, the work is characterized by the size of the worksite, the conditions in which the works are carried out, and the types of customer and of market. Those prices are without VAT, after discount. Each quarter, about 1,000 prices are collected. The sample of surveyed firms is renewed every five year.

In the domain of dwellings maintenance and improvement works, nine families are distinguished. Each family matches with only one class of the French classification of activities (NAF Rev. 2, 2008); all are in the division 43 "Specialised construction activities". A price index is computed for each family and the global index is obtained by aggregation.

The nine indices of each family of work and the global one are fixed-base Laspeyres indices, whose weights are refreshed every five years

Diffusion

Historical data of dwellings maintenance and improvement price work index (IPEA) are available on www.bdm.insee.fr, raw data, reference 100 in 2010 for IPEA index and its nine "families".
