Index for updating material assets in construction

2010=1

Heading		May 2016	June 2016	July 2016
IM	Index for updating material assets in construction	1.0288	1.0441	1.0508

Note: The IM index goal is to update the value of equipment in absence of an available replacement value for the calculation of equipment use charges. It should not be confused with various index for construction "equipment item for civil engineering indices" (MATP) whose purpose is escalating contracts.

Definition

The Building indices, Civil engineering indices and various indices for construction are producer cost indices of different activities in the construction sector, mainly used for escalating contracts.

Method of calculation

The Building indices and Civil engineering indices are costs indices of different activities in the construction sector. comprehended from six items in an analytical accounting process similar to the "KLEMST" approach used by economists in relation to productivity (where K = capital for "assets", L = labour, E = energy, M = materials, S = services for "miscellaneous costs", T = transport). Each item is broken up into basic indices issued from public statistics. The weightings of items and basic indices are fixed during the duration of the base.

Uses

Businesses and local authorities can use these official indices for construction work bids, by selecting the activity that is closest to the subject of their bid. These "indices" consist of parametric formulae representing changes in costs for different inputs, in compliance with guide "Le prix dans les marchés publics" of Ministries of economy and finance. However, other better adapted parametric formulae are also permissible, such as using the "miscellaneous costs" and "transport" headings published under "various indices in the construction industry".

In contracts signed before the publication in the *Journal Officiel* of 16 January 2015, past Building indices (BT), current Civil Engineering indices (TP) and various indices for construction have to be used until September 2014 inclusively, and, since October 2014 inclusively, the stopped series can be extended by the multiplication of the corresponding series by the connecting coefficient. The obtained product is to be rounded with one decimal.

Dissemination

These indices are monthly published in the *Journal officiel*. Historical data are available on www.bdm.insee.fr :
