- Tourism occupancy in hotels, campsites and holiday and other short-stay accommodation in metropolitan France – Q4 2016

## In Q4 2016, tourist nights picked up sharply (+3.9% y-o-y)

### **Tourist nights bounced back in metropolitan France**

In the fourth quarter of 2016, throughout metropolitan France, the number of overnight stays in tourist collective accommodation recovered sharply (+3.9% compared to the same period in 2015) after two consecutive quarters of decline. This strong rebound more than offset the sharp decline (-1.8%) recorded one year earlier linked to the impact of the terrorist attacks. The number of overnight stays overtook the level of the fourth quarter 2014. This rebound, which was particularly marked for French customers (+4.3%), also concerned foreign customers (+2.9%).

### **The overnight stays advanced strongly in high end hotels**

The overnight stays in hotels picked up in the forth quarter (+4.9% year on year), more for French customers (+5.7%) then for foreign customers (+3.0%). Occupancy went up sharply in four or five-star hotels (+9.9%), mainly due to French customers. This rebound concerned the whole territory. The sharpest upturn was in provincial urban areas (+6.9%). However, growth in Ile-de-France (+4.5%) did not allow to return there at the level of the fourth quarter 2014. The room occupancy rate went up sharply (1.6 points year on year), after two quarters of decline.

### **Occupancy in holiday and other short-stay accomodation increased modestly**

The overnight stays in holiday and other short-stay accommodation (HOSSA) recovered slightly in the fourth quarter (+0.7%), after one year of steady decline. The number of customers in tourism residences started to rise again. However, tourists shied away from the other accommodations, especially holiday villages. In HOSSA, unlike hotels, the number of foreign customers rose more than that of French customers, especially in the urban area. The occupancy rate of HOSSA increased (+1.6 points year-on-year, to 52.4%), in a context of a declining number of rooms offered.

## Sharp increase of occupancy in November and December in hotels

After recovering slightly in October compared to the same month of the previous year, occupancy picked up sharply in November, both in hotels and HOSSA. In December, this increase continued in hotels, but stopped in HOSSA, affected by lack of snow at ski resorts.

### Average length of stay and occupancy

	Average length of stay (days)		Occupancy rate ** in %	
	2015	2016	2015	2016
	Q4	Q4 *	Q4	Q4 *
<b>Hotels</b>	<b>1.7</b>	<b>1.7</b>	<b>53.3</b>	<b>54.9</b>

### Revisions

Compared to the previous publication, the overall variation in the number of overnight stays in Q3 2016 is unchanged. The decrease has been lowered by 0.2 points in HOSSA (-3.6% instead of -3.4%). It is unchanged for hotels (-4.1% in Q3) and for campsites.

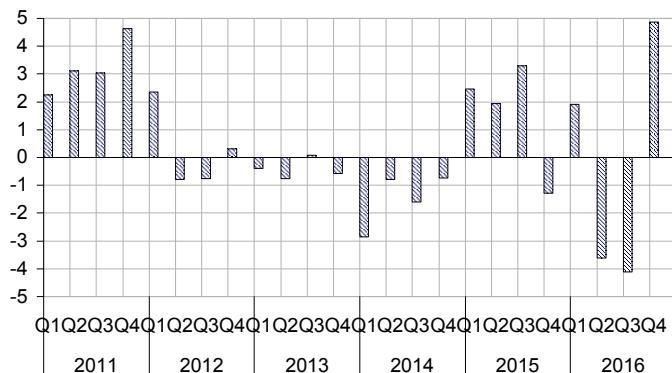

### Additional data

The additional historical data downloadable on the INSEE website makes it possible to assess the year 2016 on the scope of this publication.

Furthermore, a study on tourist activity in 2016, including a first evaluation of the activity of internet platforms will be published soon in the Insee Analyses collection.

### For more information :

INSEE conducts monthly surveys on attendance in collective tourist accommodation: hotels, campsites and holiday and other short-stay accommodation (HOSSA). These include tourist homes (including "aparthotel"), holiday villages, family homes and youth hostels. They do not include accommodation offered by private persons. For campsites, questioning concerns only the months of May to September.
