Main Indicators

■ Prices index – provisional results April 2017

In April 2017, consumer prices increased by 1.2% year on year

Over a year, the Consumer Price Index (CPI) should barely accelerate in April 2017 (+1.2% after +1.1% in March) according to the provisional estimate made at the end of the month. This slight increase in year-on-year inflation should come from a smaller drop in manufactured product prices, partly offset by a slight deceleration in the prices of energy, food and services.

Over one month, consumer prices are set to come to a standstill (+0.1% after +0.6% in March). This sharp slowdown should be due to that of manufactured product prices, which is seasonal. The prices of petroleum products and food should continue to fall, but at a lesser rate than in the previous month. Services prices should accelerate a little, owing to transport services.

Year on year, the Harmonised Index of Consumer Prices should rise by 1.4%, as in the two previous months. Over one month, it should slow down sharply to +0.1% after +0.7% in March.

Warning: These provisional results are only preliminary data. Accordingly, they should not be used for contractual revaluations. The indices published here are based on a limited set of price observations and from estimates of some rates of change for fares which are not yet available. The complete results will be published on 16 May 2017.

Consumer Price Indices

Year-on-year change %; 2015: 100

	Weight 2017	April 2016	March 2017	April 2017 (p)
