Main indicators

■ Monthly business survey in services – May 2017

In May 2017, the business climate in services is virtually stable above its long-term average

According to business managers surveyed in May 2017, the business climate in services remains favourable. The business climate composite indicator is virtually stable at 103, above its long-term average (100). Because of late businesses' answers that have been taken into account, the indicator of April 2017 has been revised upward by one point.

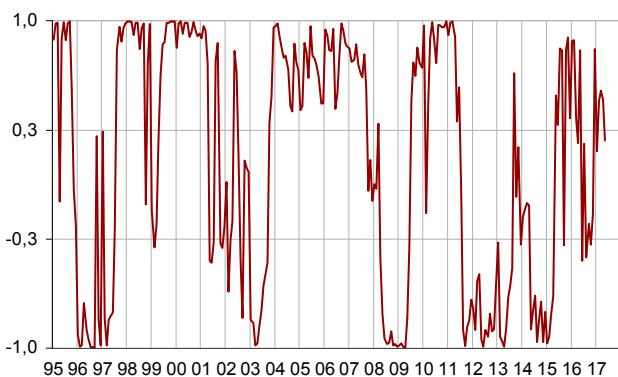

Business climate composite indicator

Standardized indicator : average = 100 and standard deviation = 10

The turning point indicator has returned in the area indicating a short-term economic uncertainty.

Turning point indicator

Note: close to 1 (respectively -1), this indicator indicates a favourable short-term economic situation (respectively unfavourable). Between +0.3 and -0.3: uncertainty area.

Overall business prospects have improved slightly again

The balance on general outlook, which relates the assessment of business leaders over their whole sector, has improved slightly again, exceeding even more its long-term average. That on expected activity is stable, slightly below its long-term average. However, the balances on past activity and expected demand have decreased, falling back to their long-term average or almost.

The balances on employment remain clearly above their long-term average, despite a slight decrease in that on expected employment.

Fewer business managers consider that the prices have gone down or will go down; the corresponding balances stand close to their long-term average.

The balance on past investments has increased a little further. That on expected investments has recovered, after a sharp decrease in April. Both balances stand above their long-term average.
