Main indicators

■ Second-hand housing price indices – Q1 2017

Further of the rise in the prices of second-hand dwellings and in the volume of transactions in Q1 2017

In Q1 2017, the prices of second-hand dwellings kept increasing: +1.9% compared to the previous quarter (provisional seasonally adjusted results). The increase is virtually similar for flats (+1.9%) and for houses (+1.8%).

Over a year, the increase in prices was confirmed and strengthened: +3.0% compared to Q1 2016 after +1.5% the quarter before. This increase was larger for flats (+3.4%) than for houses (+2.6%).

In Île-de-France, the rise in the prices of second-hand dwellings intensified

In Q1 2017, the prices of second-hand dwellings in Île-de-France continued to rise: +1.8% compared to Q4 2016, after +0.4%.

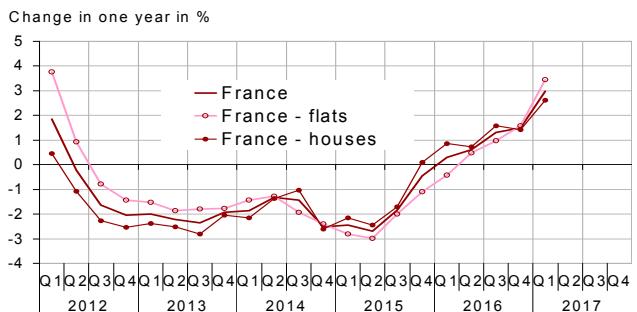

Year-on-year, the rise in prices continued to strengthen: +3.8% compared to Q1 2016, after +2.6% and +2.0%. This rise was mainly buoyed by the prices of flats (+4.5%), especially for the flats in Paris which increased by 5.5% over a year. The prices of houses in Île-de-France also increased, albeit less markedly (+2.4%).

In provincial France, prices of second-hand dwellings also accelerated

In provincial France, the prices of second-hand dwelling rose by 1.9% between the fourth quarter of 2016 and the first quarter of 2017.

Over the year, prices were still increasing, but in a less markedly than in Île-de-France: +2.6% between Q1 2016 and Q1 2017. Unlike in Île-de-France, the rise was similar for houses (+2.6%) and for flats (+2.5%).

The annual volume of transactions continued to grow

In Q1 2017, the annual transaction volume continued to grow: in March, the number of transactions carried out over the last twelve months reached the historical level of 881,000. This volume of transactions was thus significantly higher than the one recorded one year before (809,000 in March 2016), and than the high level of December 2016 (845,000). This level has been reached in a context of trend growth in the number of existing dwellings (around +1% on average per year for thirty years).

For more information:

The calculation of the indexes is based on the transactions completed during the quarter. The methodology is based on models explaining the price of housing according to its characteristics. With these models, the current value of a reference housing stock is estimated. Methodological principles of calculation of indexes are found in "Les indices Notaires-Insee de prix des logements anciens", Insee Méthodes n° 128 released in July 2014.

When this *Informations Rapides* is published, around 30 indexes for big cities are not yet available. Between two publications, at the middle-quarter, the Insee Macro-economic database (BDM) and the historical data available on the web page of the index are updated to incorporate this information and update the data previously released.
