Main Indicators

Prices index – provisional results July 2017

In July 2017, consumer prices increased by 0.7% year on year

Over a year, the Consumer Price Index (CPI) should rise by 0.7% in July 2017, as in the previous month, according to the provisional estimate made at the end of the month. This stability in year-on-year inflation should come from a slight acceleration in services and energy prices, offset by a slowdown in food prices. Manufactured product prices should drop at the same pace as in June.

Over one month, consumer prices are set to decline seasonally after a stability in June. This decrease should come from a significant downturn in manufactured product prices due to the summer sales and a further drop in energy prices. Contrariwise, services prices should accelerate sharply in the wake of airfares and accommodation services owing to summer holidays. Food prices should recovered slightly after a downturn in the previous month.

Year on year, the Harmonised Index of Consumer Prices should increase by 0.8%, as in the previous month. Over one month, it should drop, after a stability in June.

Warning: These provisional results are only preliminary data. Accordingly, they should not be used for contractual revaluations. The indices published here are based on a limited set of price observations and from estimates of some rates of change for fares which are not yet available. The complete results will be published on 11 August 2017.
