Main Indicators

■ Prices index – provisional results September 2017

In September 2017, consumer prices increased by 1.0% year on year

Over a year, the Consumer Price Index (CPI) should rise by 1.0% in September 2017, after +0.9% in the previous month, according to the provisional estimate made at the end of the month. This increase in year-on-year inflation should come from an acceleration in food prices and in energy prices and also a lesser drop in manufactured product prices. Services prices should slow down slightly.

Over one month, consumer prices should edge down (–0.1%) after a rebound in August. This decline should mainly come from a seasonal rebound in services prices, essentially those of tourism-related services. Moreover, food prices should fall after a stability in the previous month. Energy prices should slow a little, the stability in gas and electricity prices moderating a sharp rise in the prices of petroleum products. On the other hand, manufactured product prices should accelerate after a seasonal rebound in August.

Year on year, the Harmonised Index of Consumer Prices should increase a little faster, to +1.1% after +1.0% in August. Over one month, it should edge down: –0.1% after a rebound to +0.6% in the previous month.

Warning: These provisional results are only preliminary data. Accordingly, they should not be used for contractual revaluations. The indices published here are based on a limited set of price observations and from estimates of some rates of change for fares which are not yet available. The complete results will be published on 12 October 2017.

Consumer Price Indices

Year-on-year change %; 2015: 100

	Weight 2017	Sept. 2016	Aug. 2017	Sept. 2017 (p)
