

Informations Rapides

■ Quarterly national accounts – Detailed figures Q4 2017

French GDP increased by 0.6% in Q4 2017

Edited version on 1 February 2018: the contribution of foreign trade on GDP growth in 2017 was -0.3 points (instead of -0.4 as published on 30 January 2018).

In Q4 2017, GDP in volume terms* increased again: +0.6%, after +0.5% in Q3. On average over the year, GDP accelerated markedly: +1.9% after +1.1% in 2016.

Total gross fixed capital formation (GFCF) accelerated slightly (+1.1% after +0.9%) while household consumption expenditure slowed down (+0.3% after +0.6%). Overall, final domestic demand excluding inventory changes contributed to GDP growth by +0.5 points in Q4 2017 (after +0.6 points).

Foreign trade balance contributed positively to GDP growth (+0.6 points after -0.5 points): exports accelerated markedly (+2.6% after +1.1%) while imports slowed down sharply (+0.7% after +2.4%). Conversely, changes in inventories contributed negatively (-0.5 points after +0.3 points).

*This growth rate is seasonally and working-day adjusted; volumes are chain-linked previous-year-prices volumes.

Total production kept on increasing

In Q4 2017, total production accelerated slightly in Q4 (+0.8% after +0.7%), mainly due to manufacture industry (+1.5% after +0.8%). In contrast, energy production weakened a little. In services, production rose overall again (+0.7% after +0.6%).

On average over the year, total production sped up (+2.3% after +0.9%), in particular in manufacturing industry (+2.0% after +0.8%) and in construction. Agricultural production also recovered (+2.3% after -5.6%), after the adverse weather conditions in 2016.

Household consumption slowed down

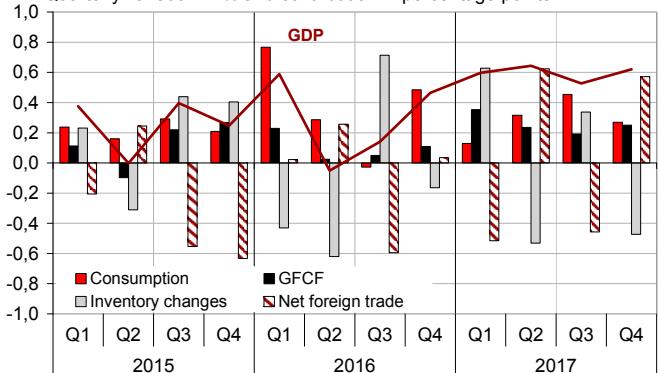

In Q4 2017, household consumption slowed down (+0.3% after +0.6%). Consumption of services grew at the same pace as in the previous quarter (+0.6%), while expenditure in goods declined slightly (-0.1% after +0.6% in Q2 and Q3).

Energy consumption declined (-0.9% after +1.5%), mainly because of temperatures lower than the seasonal norms in Q3. Expenditure on engineered goods slowed down (-0.1% after +1.2%), notably because of a sharp slowdown in equipment goods and a downturn in other industrial goods. On average over the year, household consumption slowed

down in 2017 (+1.3% after +2.1%), mainly because of a marked slowdown in goods.

More

The statistical overhang of a variable is the annual growth rate which would be obtained if this variable was to remain at its level of the last known quarter.

- More data (time series since 1949, methodology, etc.) are available on the dedicated web page: <https://www.insee.fr/en/statistiques?debut=0&theme=32>

Corporate investment accelerated

Total GFCF accelerated in Q4 2017 (+1.1% after +0.9%). Investment in construction rose again (+0.4% after +0.5%); it remained dynamic in the building sector but decreased in public works. GFCF in manufactured goods sharply accelerated (+1.9% after +1.3%), particularly in transport equipment. Investment in tradable services also remained dynamic (+1.5% after +1.0%), notably in the information-communication sector (softwares publishing).

All in all, non-financial corporations investment accelerated over the past quarter (+1.5% after +1.1%), while household investment slowed down a little (+0.7% after +1.0%).

Over the year 2017, total GFCF accelerated sharply: +3.7% after +2.7%.

Foreign trade balance contributed positively to GDP growth

In Q4 2017, exports accelerated (+2.6% after +1.1%), because of sales of transport equipment. At the same time, imports significantly decelerated (+0.7% after +2.4%), mainly because of a sharp decline in transport equipment. All in all, foreign trade balance contributed to GDP growth by +0.6 points (after -0.5 points).

On average over the year, exports considerably accelerated (+3.5% after +1.9% in 2016) while imports progressed virtually at the same pace than in 2016 (+4.3% after +4.2%). As a consequence, the weight of foreign trade balance on GDP growth was lesser in 2017 than in 2016 (-0.3 points after -0.8 points).

Changes in inventories weighed on GDP growth

In Q4 2017, changes in inventories contributed negatively to GDP growth (-0.5 points after +0.3 points). This decrease is mainly due to transport equipment (notably aeronautics).

On average over the year, the contribution of changes in inventories to the activity stood at +0.4 points (after -0.1 points).
