Main Indicators

■ Price index – provisional results January 2018

In January 2018, consumer prices increased by 1.4% year on year

Over a year, the Consumer Price Index (CPI) should rise by 1.4% in January 2018 after +1.2% in the previous month, according to the provisional estimate made at the end of January 2018. This increase in the year-on-year inflation should come from an acceleration in services prices and in energy prices and a slight rebound in “manufactured product” prices whereas food and tobacco should slow down.

Over one month, consumer prices should edge down by 0.1% after +0.3% in December. Energy prices should sharply accelerate because of the increase in Brent crude and in taxation. Food prices should rise slightly. On the other hand, “manufactured product” prices should fell back significantly, due to the beginning of winter sales. Tobacco prices should edge down. Lastly, services prices should slow down.

Year on year, the Harmonised Index of Consumer Prices should increase faster than in the previous month (+1.5% after +1.2% in December). Over one month, it should edge down: -0.1% after +0.4%.

Warning: These provisional results are only preliminary data. Accordingly, they should not be used for contractual revaluations. The indices published here are based on a limited set of price observations and from estimates of some rates of change for fares which are not yet available. The complete results will be published on 22 February 2018.
