#### For further information

The flash estimate of payroll employment, available about 45 days after the end of the quarter, covers only the private sector. In industry, construction and market services excluding temporary work, it is based on calibration models estimated by Dares and Insee based on data from the "Activité et conditions d'emploi de la main-d'œuvre" (Acemo) survey and data from the Insee business surveys of business leaders. The use of modeling makes it possible to extrapolate to all companies the results of the Acemo survey, which covers only those of at least 10 employees. In agriculture and mainly non-market services, estimates are based on recent trends. The flash estimate of temporary employment is made by Dares on the basis of nominative social declarations (DSN).
