30 novembre 2018 - n° 312

Main Indicators

■ Price index – provisional results November 2018

In November 2018, consumer prices increased by 1.9% year on year

Over a year, the Consumer Price Index (CPI) should slow down to +1.9% in November 2018, after +2.2% in October, according to the provisional estimate made at the end of the month. The drop in inflation should come from a deceleration in the prices of services, energy, food and tobacco. Those of manufactured products should decrease a little less than in the previous month.

Over one month, consumer prices should edge down: -0.2% after +0.1% in October. After seven months of consecutive rise, energy prices should fall back, in the wake of petroleum product prices. Those of services should also drop due to a seasonal downturn in airfares and a fall in communication services. Food prices should drop, as in the previous month. Those of manufactured products should rise slightly after a stability in the previous month.

Year on year, the Harmonised Index of Consumer Prices should slow down to +2.2% after +2.5% in October. Over one month, it should edge down by 0.2% after +0.1% in the previous month.

Warning: These provisional results are only preliminary data. Accordingly, they should not be used for contractual revaluations. The indices published here are based on a limited set of price observations and from estimates of some rates of change for fares which are not yet available. The complete results will be published on 13 December 2018.

Consumer Price Indices

Year-on-year change %; 2015: 100
